Skills

- MOBILE**
React Native, Expo
- INTERFACE**
TypeScript, NextJS, ReactJS, Tailwind
- BACKEND**
Node.js, Payload CMS, Better Auth
- STATE & DATA**
PostgreSQL, Drizzle, Prisma, React-Query
- INTEGRATIONS**
Claude, OpenRouter, ChatGPT, Gemini, Grok, Stripe, PostHog, Sentry, Inngest, Firebase, Supabase
- CLOUD**
AWS, Google Cloud, Vercel Blob, Supabase Storage, Cloudflare R2, Dokploy, Coolify, Azure
- DELIVERY**
Git, GitHub, Docker, Turborepo

Summary

Full-stack developer with 10+ years of experience building web, mobile, and AI-powered applications. I enjoy leading projects, optimizing infrastructure, and creating scalable solutions. My expertise spans multiple languages, frameworks, and cloud platforms, enabling me to adapt quickly and deliver high-quality, user-focused products.

Experience

- Freelance Software Engineer** Sept 2024 - Present
Freelance — Malolos, Bulacan, PH
- Built and deployed full-stack web and mobile apps with Next.js, React Native (Expo), and PostgreSQL, optimized for performance and scalability.
 - Developed AI-powered solutions using LLMs, chatbots, and NLP pipelines to enhance user interaction.
 - Integrated Payload CMS and Next.js APIs for dynamic, content-driven applications.
 - Managed AWS deployments (EC2, S3, CloudFront, RDS) with secure, automated CI/CD pipelines.
 - Optimized Expo app performance and handled successful App Store and Play Store releases.

- Full Stack Developer** July 2023 - Sept 2024
Stream.TV (Cayman) — Georgetown, KY
- Built and maintained front-end apps and admin consoles for YuVee using React, Next.js, and Laravel.
 - Managed backend APIs in Laravel (PHP) and handled MySQL database design and optimization.
 - Oversaw DevOps and deployments on AWS using Docker, ensuring uptime and scalability.
 - Integrated third-party services (rewards, video, advertising, analytics, push notifications) into platform workflows.

- Senior Full Stack Developer** January 2019 - July 2023
NET(net) Inc. — Georgetown, KY
- Designed and developed the company's SaaS platform (WIN(win)) using PHP, Symfony, and React.
 - Built and documented RESTful APIs with RAML specifications for scalable service integration.
 - Developed and maintained the mobile app using React Native for iOS and Android.
 - Managed AWS infrastructure, including web, database, and search servers for production environments.

- Software Developer** November 2015 - August 2017
Egis Projects Philippines — Pasig, PH
- Developed and supported internal applications using .NET (C#), WPF, and SQL Server.
 - Delivered system enhancements and bug fixes based on QA testing and user feedback, improving reliability and performance.

Projects

Resiboo

- An offline-first receipt scanner I started for my wife because we kept losing our receipts. Scan a receipt and Resiboo reads the merchant, total, and every line item, then files it for later — no account, no cloud required.

Stack: React Native, Expo, Drizzle ORM, Offline-first

OPIC - Nightlife App

- OPIC brings nightlife events, ticketing, table bookings, and venue discovery into one mobile-first experience, backed by a companion web dashboard venues use to manage their own events, offers, and staff.

Stack: React Native, Expo, Next.js, Drizzle ORM, Stripe

WIN(win) AI

- AI-enabled chat application for mobile and web, built for internal use at NET(net) using their own data as the knowledge base.

Stack: NextJS, ReactJS, Prisma, Clerk, Vercel, Generative AI, Vertex AI

YuVee

- Sole full-stack developer on this project, owning both the back-end and front-end. Also managed DevOps and AWS deployment, introducing Docker for the new web application.

Stack: Laravel, NextJS, MySQL, Docker

Plant Tea-ta

- Web application for a local milk tea business, serving as the POS and inventory system with built-in sales analytics and a rewards program for frequent buyers.

Stack: VueJS, Quasar, Firebase, Firestore

Shop Diggy

- Front-end developer on a mobile application that helps users compare deals across different e-commerce websites.

Stack: C#, Xamarin, Cross Platform

Disguised Mari Web

- Web application for the Discord bot, used to manage and update its recommendation data.

Stack: VueJS, AWS Api Gateway, AWS Lambda, DiscordJS, Heroku

HOME VISION: Face Recognition

- Home security system that uses face recognition to detect unrecognized individuals entering the premises.

Stack: C#, Image Processing, EmguCV, WPF

Stratos Command

- A multi-tenant B2B SaaS starter kit: organizations, invitations, and SSO/SAML via Better Auth, a Payload CMS backend, Stripe billing, audit logs, and an AI-powered support chat (Stratos Support) built on OpenRouter — forked and rebranded as the foundation for new products.

Stack: Next.js, Payload CMS, Better Auth, Stripe, OpenRouter

Finn AI

- An organization-level AI chat platform: folder-based conversation organization, model-tier selection across multiple LLM providers via OpenRouter, a pre-flight filter classifier for governance, and an admin analytics dashboard for org owners.

Stack: Next.js, Payload CMS, OpenRouter, Vercel AI SDK, Stripe

SaaS Platform Mobile Application

- Led front-end development for the mobile version of an existing SaaS platform, and helped plan, design, and set up the initial back-end.

Stack: React Native, PHP, Symfony, api-platform, PostgreSQL, MongoDB

Real-time RFID Registration

- Full-stack developer on a team building an appointment system for customers to install RFID stickers used in expressway toll systems.

Stack: ReactJS, Vite, ASP.NET, MSSQL

TARA: Tracking and Routing

- Ride-hailing style tracking and routing application, similar to Grab or Uber, for reserving seats and viewing real-time user location.

Stack: C#, Xamarin, Cross Platform, Web API, ASP.NET, Google Maps

PlokerNow

- A public web application for quickly setting up Planning Poker sessions. Personal project.

Stack: VueJS, Quasar, Firebase, Firestore

Disguised Mari Bot

- A Discord bot built for the game Grand Chase, providing tailored recommendations based on user commands.

Stack: NodeJS, AWS S3, Canvas, DiscordJS, Heroku

HALOMET: Voice Command Navigation System

- A helmet-embedded navigation system using speech recognition for hands-free navigation, with collision sensors for added safety.

Stack: Raspberry Pi, C#, Web API, Google Maps, Windows 10 IoT
